

IN THE CLAIMS:

Please cancel Claim 6, without prejudice or disclaimer of subject matter.

Please amend Claims 1-5 and 7-10, as indicated below. The following is a complete listing of claims and replaces all prior versions and listings of claims in the present application:

Claim 1(currently amended): A contents information ~~output printing~~ system that ~~outputs prints~~ contents information to an identifiable recording medium, comprising:

an identification ~~apparatus~~ device that identifies identification information of a recording medium to which ~~[[the]]~~ contents information is to be ~~outputted~~ printed;

a first determination device that determines whether or not ~~output printing~~ of the contents information to the recording medium is permitted based on the identification information identified by [[said]] the identification ~~apparatus is permitted~~ device;

an inhibiting device that inhibits printing of the contents information to the recording medium, if it is determined by the first determination device that printing to the recording medium is not permitted;

a second determination device that determines whether or not the contents information, which is designated for ~~output printing~~, has been registered, if the first determination device determines that printing to the recording medium is permitted; and

~~an output apparatus~~ a print device that ~~outputs prints~~ the contents information designated for ~~output printing~~ to the recording medium, based on ~~[[the]]~~ a determination by ~~said first determination device and the determination by said the~~ second determination device.

Claim 2 (currently amended): A contents information ~~output~~ printing system according to Claim 1, further comprising a management apparatus that ~~controls~~ manages the contents information ~~outputted~~ printed by ~~[[said]]~~ the print device ~~output apparatus~~ and the identification information of the recording medium to which the contents information has been ~~outputted~~ printed.

Claim 3 (currently amended): A contents information ~~output~~ printing system according to Claim ~~[[1]]~~ 2, wherein the determination by ~~[[said]]~~ the first determination device and the determination by ~~[[said]]~~ the second determination device are carried out in cooperation with ~~[[said]]~~ the management apparatus.

Claim 4 (currently amended): A contents information ~~output~~ printing system according to Claim 1, wherein:

~~said output apparatus is responsive to said first determination device determining that the output of the contents information to the recording medium is permitted and said second determination device determining that the contents information designated for output has been registered, for outputting the registered contents information; and~~

~~said output apparatus is responsive to said first determination device determining that the output of the contents information to the recording medium is permitted and when said second determination device determining that the contents information designated for output has not been registered, for outputting the contents information designated for output~~

in a case in which the second determination device determines that the contents information designated for printing has not been registered, the print device prints the contents

information designated for printing to the recording medium, and, in a case in which the second determination device determines that the contents information designated for printing has been registered, the print device prints the contents information that has been registered.

Claim 5 (currently amended): A contents information ~~output~~ printing system according to Claim 1, wherein:

~~said output apparatus is responsive to said first determination device determining that the output of the contents information to the recording medium is permitted and said second determination device determining that the contents information designed for output has been registered, for outputting the registered contents information; and~~

~~said output apparatus is responsive to said second determination device determining that the contents information designated for output has not been registered, for not outputting the contents information designated for output, regardless of the determination by said first determination device~~

in a case in which the second determination device determines that the contents information designated for printing has not been unregistered, the print device does not print the contents information designated for printing to the recording medium, and, in a case in which the second determination device determines that the contents information designated for printing has been registered, the print device prints the contents information that has been registered.

Claim 6 (canceled).

Claim 7 (currently amended): A contents information ~~output~~ printing system according to Claim 1, further comprising an information processing apparatus that designates the contents information for printing output.

Claim 8 (currently amended): A contents information ~~output~~ printing system according to Claim 1, wherein the contents information designated for printing output has already been printed outputted to the recording medium.

Claim 9 (currently amended): A contents information ~~output~~ printing system according to Claim 1, wherein:

the recording medium has a radio section attached thereto; and

[[said]] the identification device apparatus identifies the identification information of the recording medium by reading identification information sent from the radio section.

Claim 10 (currently amended): A method of printing outputting contents information to an identifiable recording medium, comprising:

an identification step of identifying identification information of a recording medium to which [[the]] contents information is to be printed outputted;

a first determination step of determining whether or not printing output of the contents information to the recording medium is permitted based on the identification information identified in [[said]] the identification step;

an inhibiting step of inhibiting printing of the contents information to the recording medium, if it is determined in the first determination step that printing to the recording medium is not permitted;

a second determination step of determining whether or not the contents information, which is designated for printing output has been registered, if it is determined in the first determination step that printing to the recording medium is permitted; and

a printing an-output step of printing outputting the contents information designated for output to the printing to the recording medium, based on [[the]] a determination in said first determination step and the determination in [[said]] the second determination step.
